### Resetting service interval indicator

NOTE: Instrument panel must indicate correct time and date before resetting service interval indicator. Service interval indicator can only be manually reset if its value is below 80% of its life, this is indicated by "!". If "o" is shown the item is not due for reset and can only be changed using diagnostic equipment.

Switch ignition ON.

Press and hold button [A] **104587** for approximately 10 seconds until first service item is displayed **103769**.

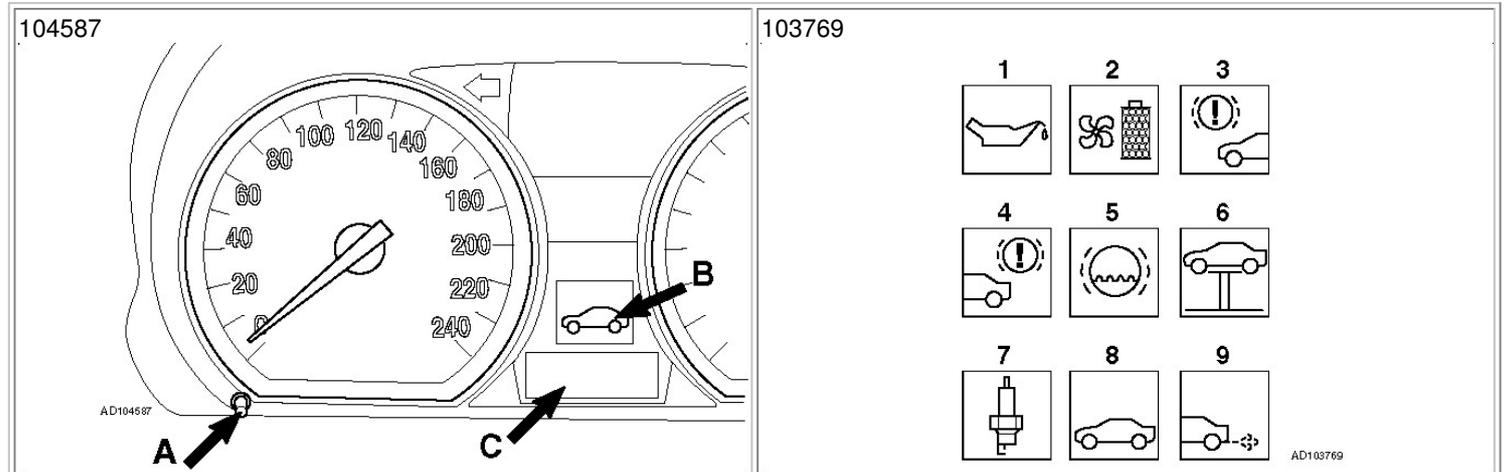

Press button [A] **104582** to display next service item.

If displayed service item is to be reset: Press and hold button [B] for 3 seconds until the message "Reset?" is displayed.

Press and hold button [B] again for at least 3 seconds.

Switch ignition OFF.

NOTE: If the microfilter (pollen filter) is reset, the battery should not be disconnected for at least 5 minutes.
